01 · Screen map & shared rules

Today · T
Selected day's routines and editable daily note.

Routines · R
All routines, recent results, management.

Notes · N
Daily notes by date, search and editing.

Insights · I
Overall activity and consistency.

Routine editor · E / Frequency · F
Create/edit identity, schedule and checklist.

Routine calendar · C / Completion checklist · K
Record a dated result / confirm every step.

Notion · S / Android widget · W
Synchronization / home-screen quick actions.

Shared logic: unchecked → done → not done → skipped → unchecked. Future routine results are blocked. Unchecked past deadlines can still count as missed; open flexible targets do not create daily failures. Changes save locally first; Notion sync needs a connection. Routine descriptions and daily notes are separate.

Capture guide: Web-rendered screens with sample data; Android may differ slightly. Widget is a schematic.

Request pattern: “On [screen · section ID], change [behavior/layout] to [result].”

Example request

“On Today · T5, add a word count below the daily note.”

02 · Today

T1 · Toolbar
Search, category filter, date picker, widget and Notion shortcuts; widget shortcut is Android-only.

T2 · Date strip
Select a day; updates both the routine list and daily note.

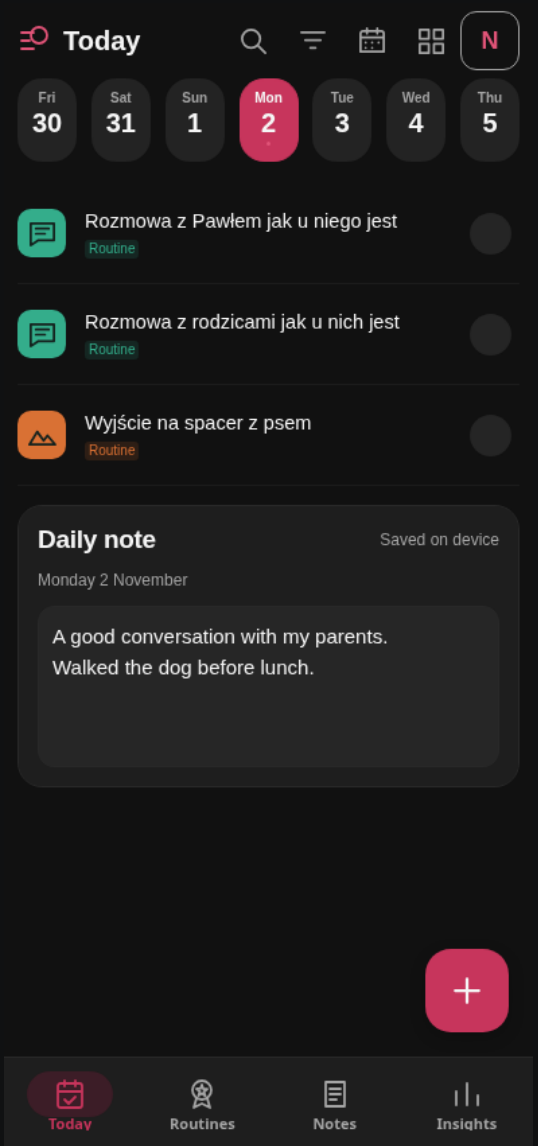

T3 · Routine rows
Icon, name, status circle. Tap circle to cycle result; tap name for details.

T4 · Expanded details
Schedule, time, category, period progress, routine description and edit icon.

T5 · Daily note
Editable text directly below routines; autosaves, shows save status and retry. One note per date.

T6 · Add routine (+)
Opens a new Routine editor.

Logic: schedule determines the list. Future dates preview routines but allow notes. Completing a routine with steps opens K first.

Current interface · sample data

03 · Routines

R1 · Toolbar

Search by name, category filter, paused-only toggle, Notion shortcut.

R2 · Routine card

Name, category icon, schedule badge and paused state.

R3 · Week strip

Last seven days through today; tap a date to cycle that routine's result.

R4 · Card footer

Streak and consistency from the last 30 days; calendar, insights and direct edit icons.

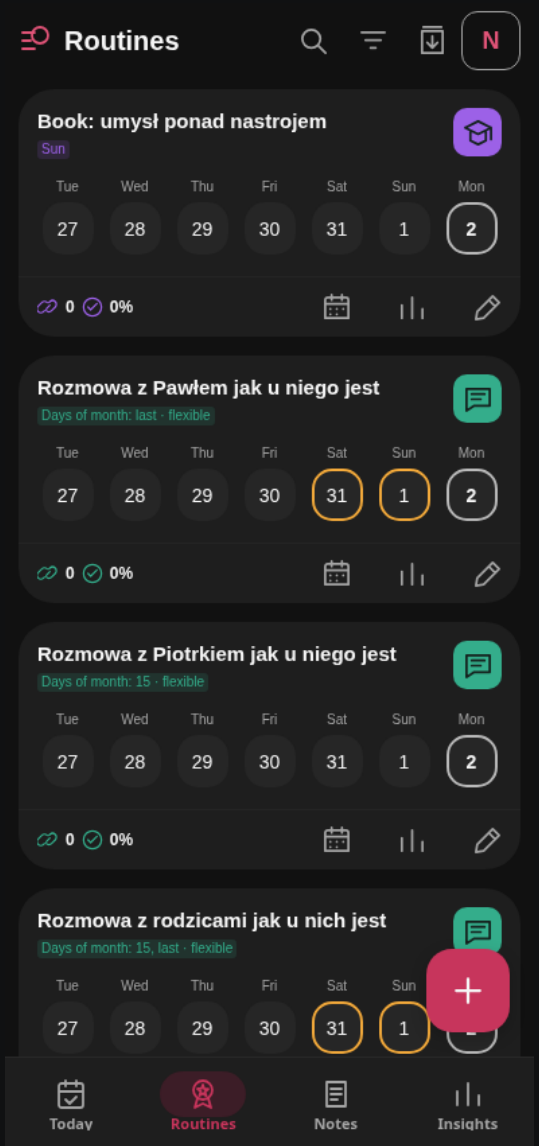

R5 · Routine insights sheet

30-day result counts and consistency; seven-day activity chart.

R6 · Add routine (+)

Opens a new Routine editor.

Logic: the calendar supports manual past/today entries outside the schedule. This does not change future scheduling. Pause/delete are in E; previous results stay preserved.

Current interface · sample data

04 · Routine editor & Frequency

E1 · Identity

Name, emoji and category.

E2 · Schedule & time

Frequency picker and HH:MM time. Time orders the plan; notifications are not enabled.

E3 · Routine description & active

Reusable instruction/note; pause or resume the routine.

E4 · Checklist

Add/remove up to 30 steps; every completion requires all steps.

E5 · Save / Cancel / Delete

Save validates fields; Cancel discards form edits; deletion requires confirmation.

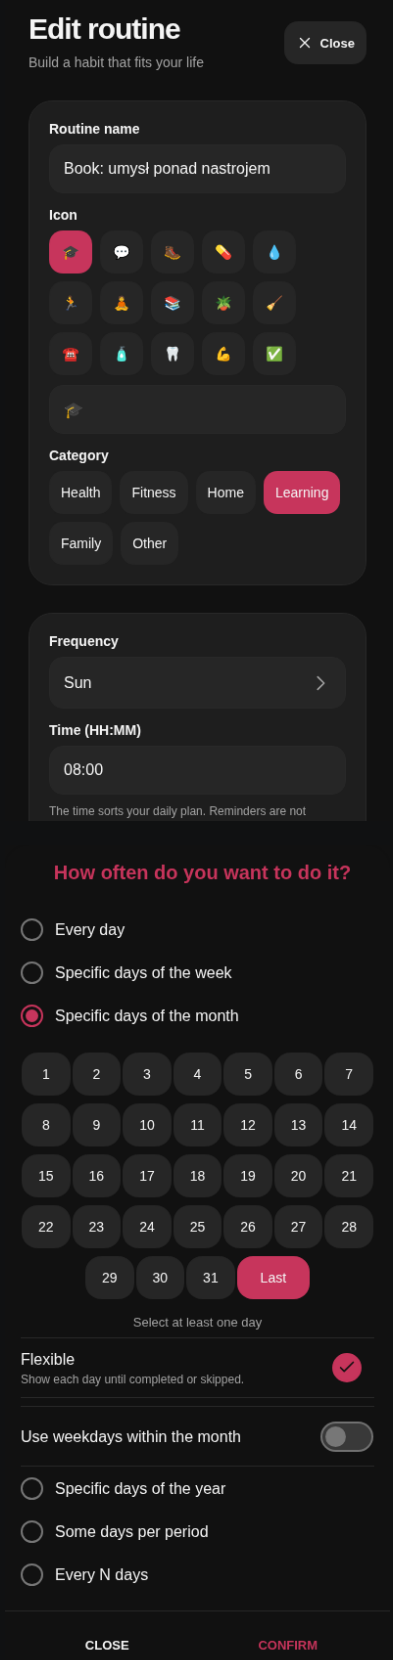

F1 · Frequency mode

Daily; weekdays; month days/Last; ordinal weekdays; yearly dates; N per week/month; every N days.

F2 · Frequency options

Relevant day grid, flexible toggle, target or interval/start date. Confirm applies to the form; Save routine persists.

Logic: flexible schedules stay visible until their due work is completed/skipped. Period targets are assessed when their window ends.

05 · Routine calendar & Checklist

C1 · Month navigation

Previous/next month and month title.

C2 · Day grid

Tap a day to cycle its result directly. Color/icons show due dates and results.

C3 · Date context

Selected date, result and any blocked-entry explanation.

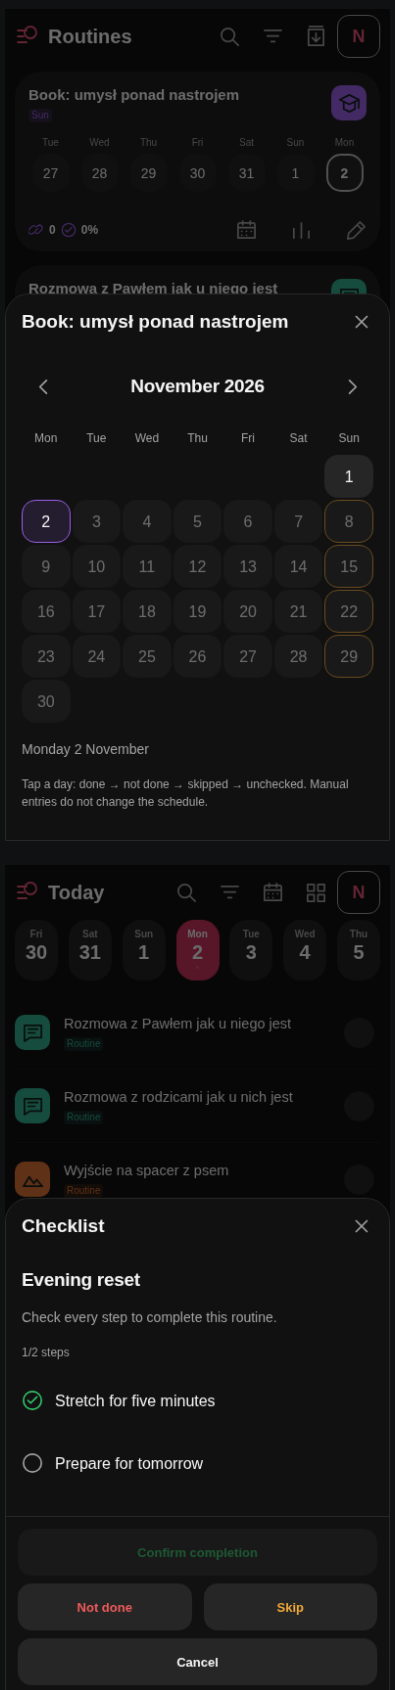

K1 · Step list

Check every step; shows checked/total progress.

K2 · Completion actions

Confirm completion unlocks only after all steps. Not done, Skip and Cancel are also available.

Logic: the general date picker selects dates only; the routine calendar edits results. Future results are blocked. Canceling a checklist leaves the result unchanged; each new completion starts fresh. Checklist confirmations stay local, outside Notion sync.

06 · Notes

N1 · Toolbar

+ edits today's note; calendar opens a note for any date; Notion shortcut.

N2 · Search

Matches note text or date.

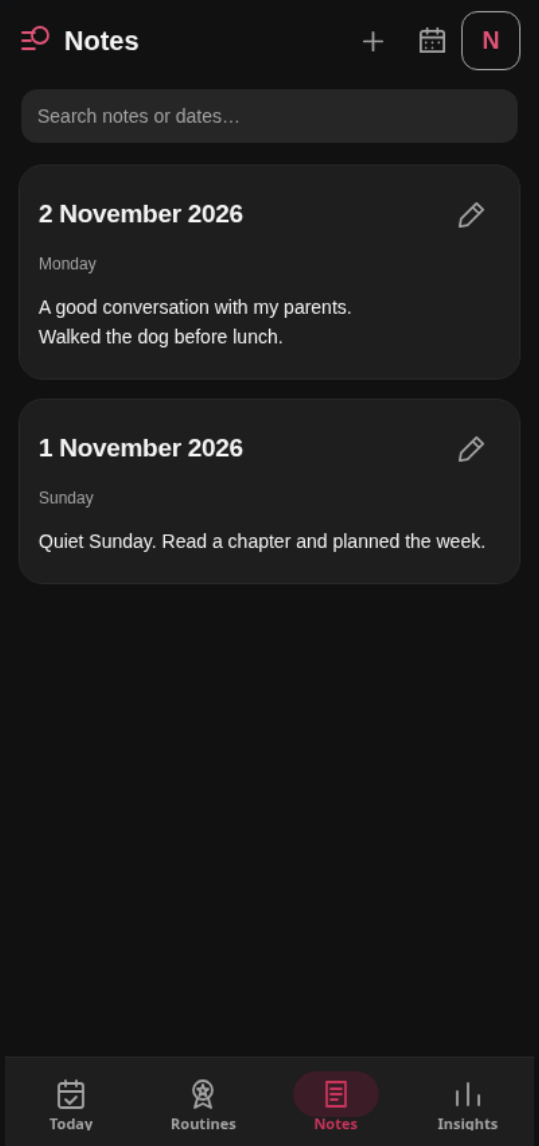

N3 · Note list

Newest dates first, dated content previews and edit icons.

N4 · Note editor sheet

Same editor/autosave as T5, bound to the chosen date.

Logic: one plain-text note per date, including past/future dates; up to 20,000 characters. Clearing text removes it from the saved list and syncs the clear to Notion. Unsaved text stays visible after a save failure for retry. Notes replaces the History tab; routine results remain stored.

Current interface · sample data

07 · Insights

I1 · Your last week

Seven days through today; done, skipped and not-done counts.

I2 · Activity

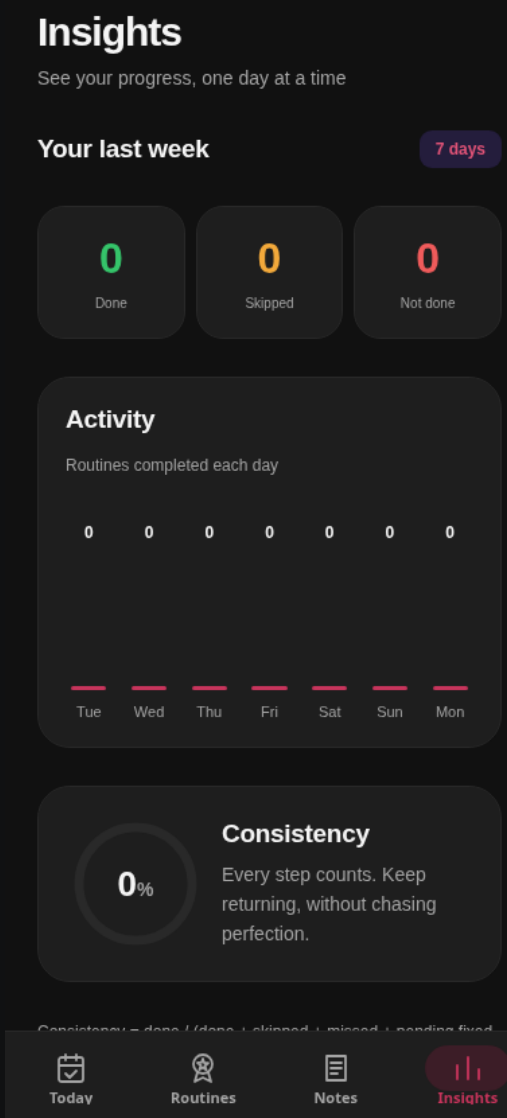

Daily completed-routine counts in a seven-bar chart.

I3 · Consistency

Percentage ring based on done versus applicable results/deadlines.

Logic: results update statistics immediately. Consistency = done ÷ (done + skipped + missed + today's pending fixed deadlines). Activity uses the result's assigned date. Open flexible targets do not create daily failures. Routine-specific 30-day statistics are in R5. Daily notes do not affect metrics.

Example: “On Insights · I2, add a 30-day range.”

Current interface · sample data

08 · Notion & Android widget

S1 · Monthly tables

Days = rows; routines = columns; Notes = daily text. Routine settings live in column descriptions.

S2 · Connection & sync

Connect/disconnect, last sync, Sync now, errors and conflict choices.

S3 · Sync behavior

Two-way routine settings/results and daily notes; current-month column additions/renames/removals update routines.

W1 · Header

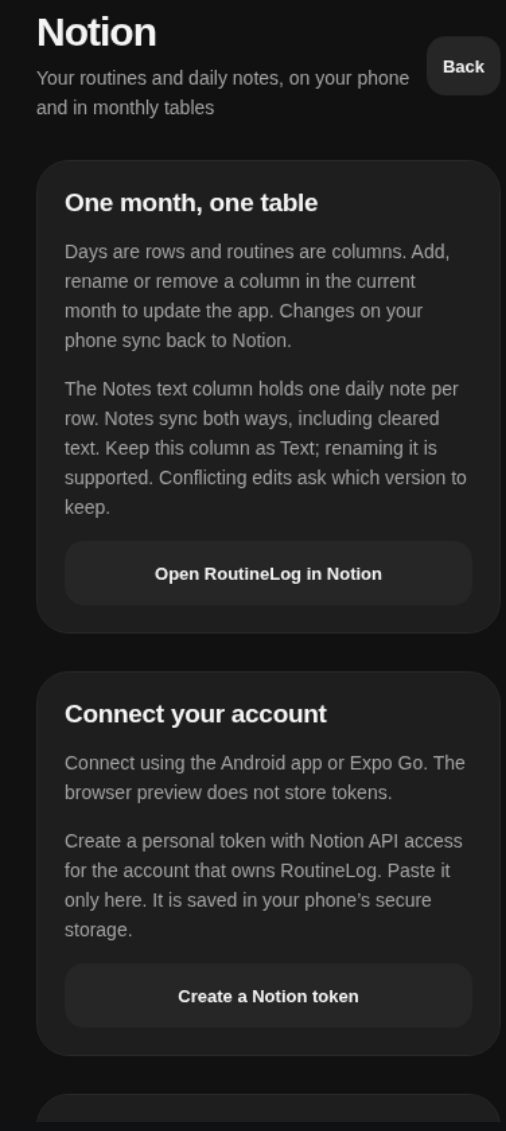

Light home-screen widget: date title, previous/next day; title returns to today.

W2 · Routine rows

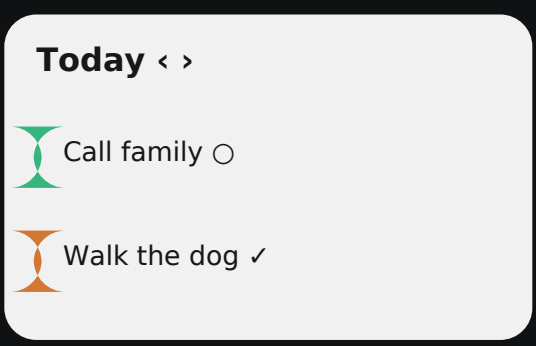

Compact names, category stripes and status circles; today's taps cycle results.

Logic: Notion sync runs on app open, after saves and every minute while open; offline data stays local. Conflicts ask which version to keep. Widget browsing outside today is read-only; checklist routines open the app for confirmation. Widget needs the installed Android APK; it does not display daily notes.

Examples: “Today · T3: show time under the name.” / “Notes · N3: group by month.” / “Widget · W2: hide completed routines.”
